Education

- **SGT University**
Master in Computer Applications; GPA: 7.27
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases

Gurgaon, India

July 2024 - June 2026

Skills Summary

- **Cybersecurity Skills:** Web Application Security (XSS, SQL Injection), Network Security Fundamentals, Vulnerability Assessment, Security Monitoring Basics, CIA Triad and Security Principles
- **Security Tools:** Kali Linux, Nmap, Burp Suite, Basic SIEM Concepts
- **Programming:** Python, JavaScript, HTML, CSS
- **Systems & Networking:** Linux, TCP/IP, DNS, HTTP/HTTPS, Operating Systems

Experience

- **Python Developer Intern**
Pinaqtech (Full-time)
Oct 2025 - Dec 2025
Remote
 - Developed and improved Python applications focused on data handling and automation.
 - Strengthened debugging, scripting, and problem-solving skills applicable to cybersecurity automation and analysis.
 - Worked with backend logic and structured code to improve program reliability, efficiency, and maintainability.
- **Web Design and Web Analysis Intern**
SGT University (Full Time)
Dec 2018 - Present
Remote
 - Analyzed website structure, performance, and input handling mechanisms.
 - Identified potential security risks related to improper input validation and insecure coding practices
 - Developed understanding of the relationship between frontend design and web application security vulnerabilities.

Projects

- **Email Threat Detection and Phishing Analysis Tool** : Developed a Python-based phishing email detection system to identify suspicious URLs and malicious patterns in email content. Analyzed common phishing techniques and implemented logic-based filtering to detect potential social engineering attacks. Improved understanding of phishing indicators, email threat vectors, and attack.
- **Basic Network Scanner** : Built a Python-based network scanner to detect active hosts and open ports within a network range. Applied networking concepts and port scanning techniques to understand reconnaissance methods used in cybersecurity assessments. Enhanced understanding of IP addressing, network discovery, and security scanning techniques.
- **Website vulnerability** : Developed a tool to identify common web application vulnerabilities such as Cross-Site Scripting (XSS) and SQL Injection. Tested web application input fields and analyzed responses to detect potential security flaws. Strengthened knowledge of web application attack vectors and vulnerability detection
- **Log Analysis & SIEM Simulator** : Developed a Python-based log analysis system that processes and examines system and authentication logs to identify suspicious behavior. Designed rule-based detection logic to flag patterns such as repeated failed login attempts, unusual access timings, and potential unauthorized entry. This project strengthened practical understanding of real-world security monitoring, attack patterns like brute-force attempts, and how analysts interpret logs to detect threats.

Certifications

- TATA : Cybersecurity Analyst Job Simulation
- Deloitte : Cybersecurity Fundamentals
- IBM : Cybersecurity Essentials
- CISCO : Cybersecurity Job Simulation
- MastterCard : Cybersecurity Tools and Ideas
